CONCEPT / LOCAL PROTOTYPE

Cognixoft Research

Organize study workflows, data definitions and repeatable dataset exports.

Who it is for

Research coordinators, investigators and institutions

What the preview lets you explore

- Explore a study data dictionary
- Include or exclude sample records
- Freeze and export reproducible snapshots

How it differs

Works with study definitions and fixed dataset exports, rather than care plans or personal routines.

Sample research demonstration. No ethics approval, compliance certification or real participant data. Fictional examples. Not validated for clinical use.

Next development step: Validate a study-to-export workflow with research coordinators and institutional requirements.
